Chrome Extension in Gmail, Outlook, and CRM Compose

Chrome Extension · https://coreel.ai/help/chrome-extension-in-gmail-outlook-and-crm-compose/

The extension helps you use coReel inside supported compose windows.

What It Does in Compose

- Detects compose editors
- Lets you insert/copy video snippets
- Supports faster send workflows from your existing tools

Basic Workflow

1. Open Gmail/Outlook/CRM compose window.
2. Launch coReel extension.
3. Choose or record a video.
4. Insert or copy snippet into compose body.
5. Review formatting and send.

Compatibility Notes

- Compose UI changes by providers can affect injection behavior
- Some editors require focusing the body field before insertion
- Keep extension updated and reload when needed

If It Doesn’t Inject

1. Refresh compose tab.
2. Ensure extension is enabled and logged in.

3. Confirm host permissions for the current domain.
4. Try copy-and-paste snippet as fallback.
5. See troubleshooting article for non-injection issues.
