Send through Zoho Zoho CRM is now a first-class sending option, with contact search, tags, and automation alongside Keap, HighLevel, and HubSpot. Connect it once in Settings → Integrations and you can send videos straight through your Zoho account.

Gmail improvements Pick a Send-As address when you compose, automatically include your Gmail signature, and search your Google contacts as you add recipients.

Video replies — fixed on mobile Video replies from your recipients now play reliably on iPhone and iPad, with sound.

Video playback — fixed on mobile Videos in My Videos now play back with audio as expected.

Screen stays awake while recording Your phone screen now stays on through the full capture pipeline — recording, upload, and processing — so it never dims mid-capture.

More reliable account connections Connecting Gmail, Outlook, Keap, HighLevel, and Zoho on the mobile app is now smooth and consistent.

Watch page sharing Recipients can share a watch-page link with others. (This shipped in a previous release but wasn't called out at the time.)

Stability and performance improvements A round of behind-the-scenes fixes across both the web app and mobile app.
