Release Notes 2026-06-12

Releases · https://coreel.ai/help/release-notes-2026-06-12/

This is one of our biggest releases yet. We added powerful new ways to track results and get notified, made it easier to start a paid plan, refreshed the mobile app, and polished dozens of details across the product. Here's everything that's new.

Track the results that matter

Conversion Webhooks — connect videos to revenue. You've always been able to see opens, plays, and clicks. Now you can see what really counts: signups and purchases. When a contact converts in your CRM — Keap, HighLevel, HubSpot, or Zoho — coReel ties that conversion back to the exact video you sent. You get new **Conversions** and **Value** tiles in your reporting, smart triggering so a conversion only counts after the video is actually played (within a time window you choose), and a ready-to-paste webhook URL right in your send confirmation and in My Emails.

Get notified where you work — Slack

Live in Slack? Now your coReel activity can too. Connect Slack from **Settings → Notifications** and your alerts — opens, clicks, plays, replies, and conversions — land in the Slack channel or direct message of your choice. Slack's own picker decides where they go, and it respects the notification settings you already have. *(Available on Business and Premium plans.)*

Start your plan on your terms

Lock in a plan during your free trial. Ready to commit before your trial ends? Choose your paid plan now — we'll keep you on your trial until it naturally finishes, then start billing. No more waiting until the last day to upgrade.

Better integrations

Install from the GoHighLevel marketplace. HighLevel users can now add MyVideoEmail (now coReel) straight from the GHL marketplace and finish connecting with a single sign-in.

Zoho: pick a verified sender address. When you send through Zoho, just choose one of your account's already-verified "from" addresses right in the composer — no manual domain or DKIM setup required.

A better mobile app (1.1.2)

The mobile app got a major round of improvements across this release:

- **Choose who your CRM email comes from** — send as yourself, as the contact's owner, or from a custom verified address.
- **Unread badge on your app icon**, kept in sync as you catch up.
- **Reliable video uploads on Android.**
- **Push notifications on Android** — know the moment your videos are opened, watched, or replied to.
- **iPhone recordings play everywhere**, including in web browsers.
- **Stay signed in** — no more surprise sign-outs after inactivity or on a shaky connection.
- **Clearer, consistent names** for all your connected accounts.

Polish & reliability

- **Sticky top navigation** — the menu stays with you as you scroll.
- **"Reply by Email" button** on every reply notification — opens a fresh message to the responder, reliably across all email clients.
- **Thumbnail editor improvements** — clearer text editing with a true-to-life preview.
- **Camera & mic dropdowns** populate the instant you grant permission.
- **More reliable video processing** — recordings finish cleanly even across behind-the-scenes updates.
- **New help articles** covering Zoho, contacts autocomplete, watch-page sharing, mobile, and more.
- Plus a broad round of **stability and performance improvements**.
