Release Notes 2026-06-29

https://coreel.ai/help/release-notes-2026-06-29/

We've shipped one of our biggest updates yet — built around a simple idea: **the more we know about who a video is for, the more we can do for you.**

Choose who a video is for

You can now pick the contact **before** you record. Do that, and *every* way you share the video is tracked to that person — not just Gmail and Outlook, but also **text messages, copied links, embeds, and share links.** Opens, plays, clicks, and replies all attribute to that contact, and your **CRM automations fire** for them.

Don't have the person saved yet? Add them on the spot — and optionally add them to your CRM — without leaving the flow. Sending to a tag, list, or broadcast instead? That path works exactly as it always has.

→ Learn how recipient-first sending works

QR codes for your watch pages

Turn any video's watch page into a **downloadable QR code.** Print it on a letter, a flyer, a business card, or a banner — when someone scans it, they land on your branded, tracked watch page. Pair it with a chosen contact and every scan is attributed to them. Best of all, a printed code **never expires.**

→ Create a QR code for a watch page

✉ Cc on Gmail and Outlook sends

Loop in a teammate or manager without making them the main recipient. When you send through your connected Gmail or Outlook account, just click **Cc** and add their address — like a normal email.

→ Add a Cc to your sends

Longer videos for Premium

Premium members and trial users can now record or upload videos up to **10 minutes** — double the previous limit. Perfect for demos, walkthroughs, and training.

→ Record longer videos

And a bunch of polish

- Starting a new video now begins **fresh** — no leftover details from your last send.
- **More accurate engagement stats**, with a new "watched" indicator on My Videos.
- Your connected **email integrations now show their provider logos.**
- A fix for the **Scheduled Emails** page so it loads reliably.

Update your mobile app

All of this is live on the web app today. The **mobile app update (v1.2.0)** is also live now on the App Store and Google Play — update to get recipient-first sending, Cc, longer videos, and more on your phone.
